

Алиакбар Исполаев

● SUCCEEDED

- Your project must be written in **Go**.
- The code must respect the **good practices**.
- It is recommended to have **test files** for unit testing.
- You can see all about the **banners** here.
- The usage must respect this format `go run . [STRING] [BANNER]` , any other formats must return the following usage message:

```
Usage: go run . [STRING] [BANNER]
```

```
EX: go run . something standard
```

If there are other `ascii-art` optional projects implemented, the program should accept other correctly formatted `[OPTION]` and/or `[BANNER]` .

```
$ go run . "hello" standard | cat -e
```

```
$ go run . "Hello There!" thinkertoy | cat -e
```

- Only the standard Go packages are allowed

This project will help you learn about :

- The Go file system(**fs**) API
- Data manipulation

5 AUDITS REQUIRED
