

Repo to create for this project $\;
ightarrow\;$ <code>https://01.alem.school/git/buzukbuzuk/ascii-art-output</code>

Obiectives

• You must follow the same instructions as in the first subject **while** writing the result into a file.

The file must be named by using the flag --output=<fileName.txt> , in which --output is the flag and <fileName.txt> is the file name which will contain the output.

• The flag must have exactly the same format as above, any other formats must return the following usage message:

```
Usage: go run . [OPTION] [STRING] [BANNER]

EX: go run . --output=<fileName.txt> something standard
```

If there are other ascii-art optional projects implemented, the program should accept other correctly formatted [OPTION] and/or [BANNER].

Additionally, the program must still be able to run with a single [STRING] argument.

Instructions

- Your project must be written in **Go**.
- The code must respect the **good practices**.
- It is recommended to have **test files** for unit testing.

Usage

Allowed packages

Only the standard Go packages are allowed

This project will help you learn about :

- The Go file system(**fs**) API
- Data manipulation

Audits
